

Table 1: Spearman's rank correlation (r_s) for total, native, and endangered species numbers of vascular plants and birds in relation to patch size and distance to the urban edge of green spaces (very significant, $p < 0.01$).**

		patch size	distance to the urban edge
vascular plant species	total	0.804**	-0.159
	native	0.903**	-0.023
	endangered	0.742**	-0.128
bird species	total	0.873**	0.032
	native	0.864**	0.031
	endangered	0.538**	0.149

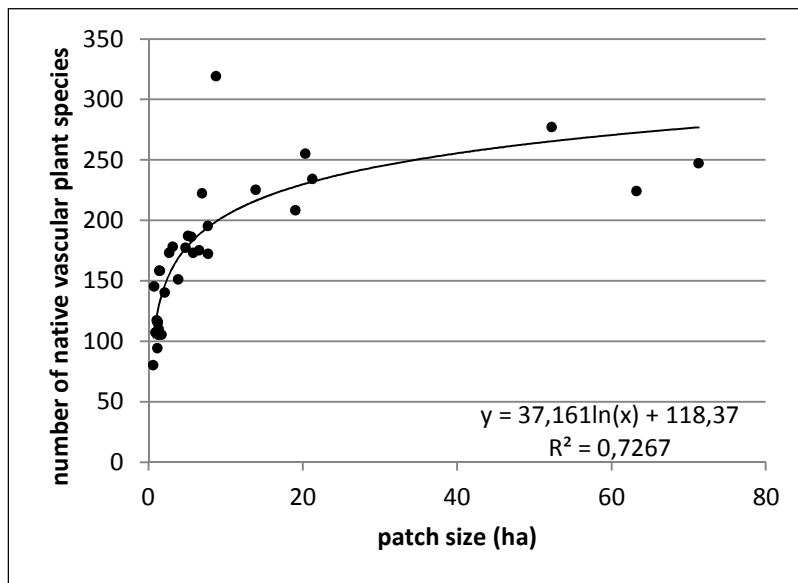

Figure 1: Number of native vascular plant species in relation to size of green spaces.

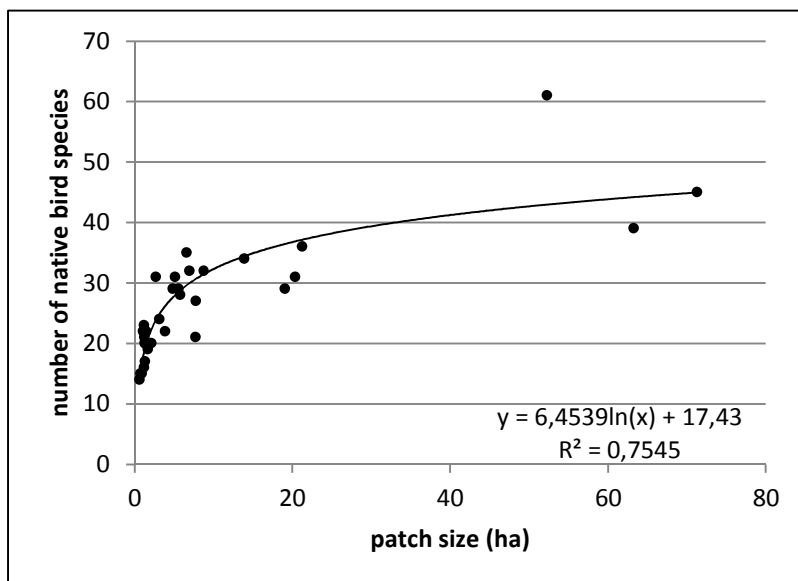

Figure 2: Number of native bird species in relation to size of green spaces.
